RELATIONSHIPS

Graphs

Vertices (nodes) connected by Edges (links)

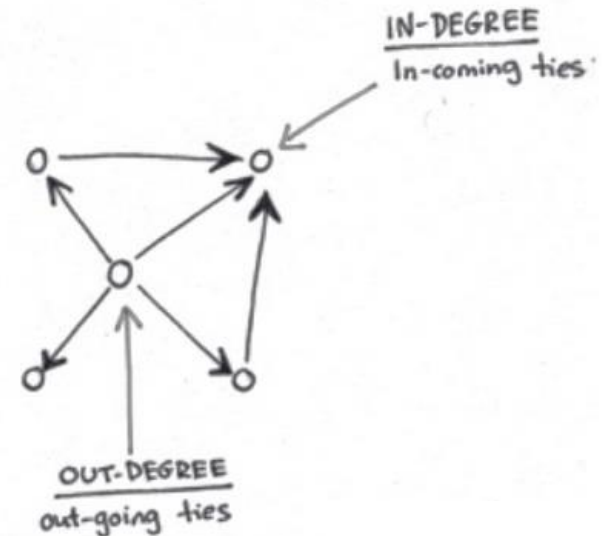

Graph Concepts

<http://www.slideshare.net/Optimice/social-network-analysis-and-graph-theory-concepts-explained>

DIRECTED
Ties have arrowheads, and direction matters

Force-Directed

Random Graph Layout

Force Directed Layout
Equilibrium State

Ex: <https://observablehq.com/@d3/force-directed-graph>

Force-Directed: Dangers

Unstable

Slow

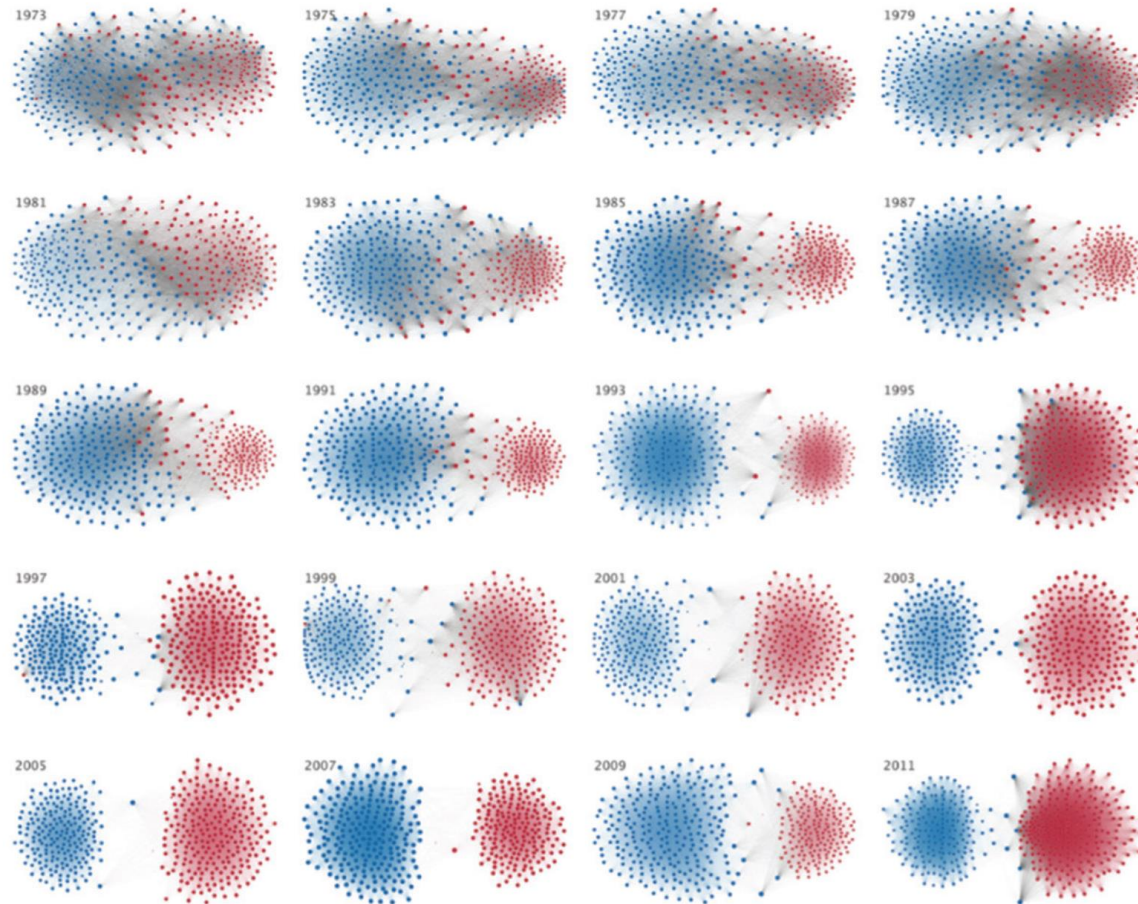

Hard to reproduce

Convergence

Hairballs...

Sometimes, not the point...

This small multiples set of network diagrams from Andris et al. (2015) shows voting behavior in the United States Congress.

Small-World Networks

High clustering, small path length

high clustering, small path length

maximal disconnected subgraphs

quotient graph: subgraph = higher-level node

Consult the Oracle!
